

## 2 Software Engineer Standard Solutions

Vaste Job - Online sinds 18 sep. 2018 - gewijzigd sinds 24 september

### Funcieomschrijving

As part of an implementation team, you are responsible for the complete development life cycle starting from the requirements analysis over the implementation to testing and providing support to the colleagues using these standard solutions at the customer 's site. After the extensive initial training and getting to know the base technology, you will work in a medium-sized team of professionals.

Because of our philosophy of reusing existing standard solutions, you will enforce best practices and standards to create consistent and easily maintainable applications and application modules. Although the quality of our software solutions is key, you will still aim to deliver assigned projects on, or ahead, of time.

As part of your daily responsibilities, you will be involved in:

The design, development, maintenance, administration and monitoring of best practice implementations  
Work with business stakeholders, internal and external technical and non-technical teams to understand, document, and prototype integration components based on business requirements documents or meetings  
Write technical specifications for new integration components based on business requirement documents and functional specifications  
Design and build/supervise development of subcomponents within predefined application architectures  
Design reusable and generic assets to increase efficiencies by eliminating repeated code  
Write, execute and react to unit tests during development cycles to ensure that code released to QA correctly follows functional and technical specifications  
Track and communicate project status to the management on a scheduled basis  
Provide knowledge and support to internal system owners with software implementations

### Profiel

You have at least a bachelor 's degree in an IT-related field or you can prove relevant experience. In addition:

You have experience with SQL and databases (Oracle and/or SQL Server and/or SAP HANA). You have experience with scripting languages and/or object orientation (languages such as C/ C++ or with similar structure). You can work effectively and efficiently both independently and as part of a functional team. You have strong written and verbal communication skills in English. Other languages (Dutch, French...) are a plus. You are an effective collaborator with internal and external customers. You can multitask and dynamically adjust priorities. You are self-motivated, creative and detail-oriented. You can work to deadlines and manage a high and varied workload. Knowledge and some experience in building data interfaces with SAP ERP is an advantage. Experience in working with a version control system like SVN, Git etc. is a plus.
