

## 5 Software Engineer

Vaste Job - **Online sinds 18 sep. 2018 - gewijzigd sinds 24 september** Functieomschrijving As a software engineer you will be part of a fast growing, international software development team, working closely together with 3-4 team players according to the scrum methodology. We believe in an integrated approach, where every member of the team takes part in analysis, the architecture, programming and debugging. This approach is very challenging since you work in different disciplines: you will develop an expert knowledge of the newest C++ standards, design patterns/UML and algorithmic thinking.

Since you are working on existing products, containing millions of code lines, it's a big challenge to add new features and make sure all modules are integrated. This implies developing product knowledge, and analytical thinking with attention to quality is of high importance as well.

You are responsible for the technical analysis and development of our supply chain planning applications. Depending on your personal interest and qualifications, you will be performing analyses and developments in one or more of the following domains: Planning and Forecasting functionality, Graphical User Interface, Integration with ERP systems, Mathematical Algorithms, Foundation

### Profiel

You have a master's degree in computer science or a similar discipline. You have basic knowledge of object oriented programming and the ability and interest to learn modern C++ programming. You benefit from experience with design patterns/UML, algorithmic thinking and C++ programming. Having an analytical mindset is essential.

You are passionate about complex software design and development.

You are fluent in English. You are fun to work with and a great team player. Jobgerelateerde competenties  
Programmeren in een computertaal: C/C++
