Dev-Ops Manager For our Esbjerg office or Stavanger HQ

Shoreline is expanding our team – We are looking for a Dev-Ops manager

About Shoreline

We're a venture-backed enterprise SaaS company providing an asset development and management platform to renewable energy industries. Shoreline's mission is to build deep partnerships with our customers in renewable energy; developing products around our intelligent simulation technology that help them solve their biggest problems.

Our users are project developers and analysts, operations planners, site managers, and management working in the likes of Siemens Gamesa, Ørsted, and Equinor, where they develop and operate renewable energy plants.

Our extensive industry domain knowledge and our unique simulation technology and data platform enable our customers to gain valuable operational insight and predictability, in all phases of the life cycle of a renewable energy plant.

About the Position

We are looking for Dev-Ops manager who is interested in a challenge and the chance to work with of the latest cloud technologies, used by a startup software development company creating optimization and simulation software to the renewable energy industry.

As Dev-Ops manager you will be responsible for operating and maintain our cloud architecture for the following domains:

- Architecture development – how do we maintain our competitive advantage
- Release management – how do we improve our releases
- Test automation – how do we reduce our test effort and at the same time improve our quality
- Customer compliance – measure for reporting about availability and performance
- Security compliance – setup and maintain our security compliance
- GDPR compliance – setup and maintain our GDPR compliance
- As Dev-Ops manager you will be a part of the development team reporting to the CTO together with the development manager.

Having a holistic architecture approach and mindset is key for us. The Dev-Ops manager will be key to a stable and reliable architecture and platform, but at the same time having an understanding of the developers' world in order to find the balance between the customers demand for reliability and innovation.

What you will do:

Make Shoreline's architecture strategy your own make sure that our software landscape develops accordingly.

Constantly having an overview of availability and performance. Followed up by reporting this status to our customers.

Understand the security risk pattern and initiate corrective actions.

In cooperation with our office manager, make sure that GDPR measures are met.

Who you are:

- Full stack developer background with DEV-OPS profile
- Software Architecture experience
- Security Experience
- Unix / Linux / Bash knowledge
- Good understanding of cloud computing (e.g., Technologies, Deployment, costing, HA/DR, etc.)
- Good understanding of DevOps principles (e.g., testing automation, BDD, TDD, Release automation, CI/CD, etc.)
- Experience with cloud deployment
- Knowledge with testing automation (e.g., Maven, Selenium, HP ALM, QC, LoadRunner)
- Experience with release governance automation
- Fluently in spoken and written English

What we offer:

- The opportunity to become a member of a fast-growing and venture-backed company with a great global potential, where your contribution will make a significant difference.
- An international work environment, with a team of knowledgeable and dedicated people that together create amazing services and software for our customers.
- A results-only work environment focused on empowerment and autonomy.
- The opportunity to work on the latest technology and frameworks
- Remuneration package matching your qualifications and market conditions.
- Team buildings and conference attendance to keep your mind fresh and innovative.
- The position is located in either Stavanger, Norway or Esbjerg, Denmark potentially combined with a home office.
