

Telecom Software System Developer

Vaste Job - Online sinds 11 sep. 2018 - gewijzigd sinds 14 september

Functieomschrijving

As a Telecom Software System Developer, you will be joining a team of talented telecom and software engineers who work with cutting edge software technology that is capable of communicating with thousands of different devices and is deployed by leading broadcast and telecom companies around the world. Every day, you will have the opportunity to

use new state-of-the-art technologies and be involved in implementing advanced solutions for prestigious broadcast and telecom companies. You will literally be building links between users and devices, with the objective to manage complex technological ecosystems more easily and intuitively than ever before.

- [+] develop front- and back-end applications for high-performance device communication
- [+] work together with team members to analyze client needs and provide first-class solutions
- [+] work closely together with our Technical Account Managers to understand the overall scope of projects and implement customer requirements
- [+] become a specialist in one or more devices or in a particular technology domain, depending on your personal interests and capabilities
- [+] grow as a technological expert and share your knowledge by guiding and teaching other team members
